

Nordic inspirations - Innovative copper treatments

Nordic Ceilings

The suspended ceiling system is a part of modern construction. The delivery package of louvre, panel and cassette ceilings includes all support materials for installation. Ceilings are designed and developed as functional units and are thus easily installed. The acoustic properties of the products are improved with perforation and by using mineral wool or acoustic felt as filling.

Nordic Net

Nordic Net is an expanded copper mesh that is used as decorative elements. The expanded metal net is made from cut and stretched copper sheets. The durable net spices up constructions. There is no limits to where it can be used!

Nordic Louvres

Nordic Louvres are used mainly as decorative façade elements and sun screens. They are also suitable for interior use, e.g. ventilation covers as decoration. The copper louvres are designed and produced for specific purposes, where it is possible to take the designer's ideas about the form and shape freely into consideration.
