

# NEW

## AnoMax <sup>1/2</sup>

AnoMax is a new range of anodised standard colours in pre-coated aluminium. The range consists of several colours in PVDF, varying from silver to black.

### Why pre-coated aluminium?

There are several benefits of using pre-coated products over the original anodising standards. Pre-coated aluminium is price attractive and the batch to batch colour equality is much better. Furthermore the bendability, colour stability, reparability, reproducibility and dirt retention of pre-coated are better.

### De Kameleon

For project "De Kameleon", a super-sized housing block including a new shopping center in Amsterdam, NL Architects selected AnoMax. A typical example where the advantages of pre-coated aluminium exceed the use of anodised material.

#### Benefits over using real anodised:

- Price attractive
- Batch to batch colour equality
- Colour stability
- Bendability
- Reparability
- Reproducibility
- Dirt retention
