

Patina copper...

is a natural material with a fantastic appearance. The patinating effect sets in over time and makes the material look alive. Sometimes however, it is desired that the patina effect is directly present or does not weather any further. In those cases a weathered copper design in pre-coated aluminium offers a perfect solution.

Copper in pre-coated aluminium

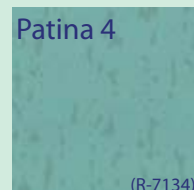

- Patina effect directly present
- No further weathering
- Customized copper designs possible
- Choose your own colour scheme
- Possibility to combine different aesthetics
- Available in various coating qualities
- Low weight - easier handling
- Price economy of aluminium
- Sustainable product
