mth concertto presto

An impressive façade at almost the same price as a profiled sheet

Metehce Oy has developed and patented the innovative MTH Concertto metal façade system. The MTH Concertto product family and its different applications offer new and high-quality material alternatives for buildings' exterior and interior surfaces and ceilings. Combining the best qualities of façade cassettes and profiled sheets, one MTH Concertto product sheet contains several embossed panels in the form of squares or rectangles. In an MTH Concertto façade, there are few cut edges and no straight horizontal surfaces that could collect dirt. The compact entity is durable and extremely rapid to install. The MTH Concertto metal façade combines beautiful appearance and freedom of design with cost-effectiveness, quick installation, and a high-quality result.

MTH Concertto Presto is a product sheet manufactured from 0.70 mm steel and is part of the MTH Concertto product family. The manufacturing programme includes eight different, standard-sized sheet options. The sheets are manufactured in high-volume batches in order to provide the client with a good-looking, quality product at an affordable price. This cost-efficient alternative and its standard-sized panels offer the same structural and installation benefits as the traditional, customisable MTH Concertto products. Each product contains several panels, guaranteeing rapid installation and a compact, uniform entity without compromising the appearance. MTH Concertto Presto is a highly competitive alternative to traditional profiled sheets and façade cassettes.

The whole MTH Concertto product family is presented in a separate MTH Concertto product folder, which contains product brochures on different alternatives, design and installation instructions, GDL objects with their instructions for use, and colour samples for standard colours.

The effective width for MTH Concertto Presto sheets is 1,200 mm and effective length 2,400 mm. There are eight different sheet alternatives available. The panels of one sheet are always the same size. Possible panel widths are 2 x 600 mm, 3 x 400 mm, and 4 x 300 mm, and the panel lengths available are 300 mm, 400 mm, and 600 mm. However, the maximum panel length for the MTH Concertto Presto 66A product type is 400 mm. The sheets can be installed vertically or horizontally. The measurement images for various sheet options can be found on the right-hand side of the page.

Product types and panel lengths: MTH Concertto Presto 3333A
Panel length 300 mm, 400 mm or 600 mm

MTH Concertto Presto 444A
Panel length 300 mm, 400 mm or 600 mm

MTH Concertto Presto 66A
Panel length 300 mm or 400 mm

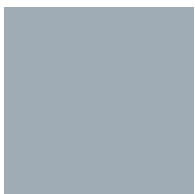

Material: Hot-dip galvanized steel sheet with PVDF coating (with protective film), material thickness 0.70 mm.

Colour selection: Impressive metallic colours as standard colours.

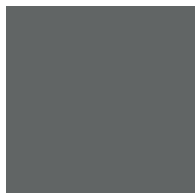

Coating

PVDF 35my is a coating for demanding interior and exterior use, with a term of guarantee of 15 years. The coating retains its colours very well and is easy to clean. It also has excellent resistance against the sun's UV radiation. It is ideal for demanding external claddings of buildings, roofs, and different structural elements.
